

REVOLUTIONIZING MANAGED SERVICES

mWise Recoverability Audit

Your data is the most valuable asset your business owns. If you lose your data, your network is inoperable, your business goes dark and if recovery is not possible, the probability of going out of business is high. Creating a comprehensive disaster recovery plan is an excellent first step towards insuring that you and your staff are prepared for the worst if it should come. But is that enough?

Critical Data Audit

Intelinet Systems' consultants perform an analysis based on your current data backup, an analysis of the critical data that resides on your servers, as well as other critical systems in your network, an in-depth survey and a discovery phase to validate that you're critical data is being backed up. The end result is an audit document that details your current backup policies and our recommendations.

Trial Restores

Your backup isn't successful until you've gotten your data back after a failure that resulted in data loss. mWise Recoverability Audit provides a process to do a trial restore that insures that you're data can be recovered. This process also helps in identifying issues that your plan did not foresee. In today's environments, people, software, hardware and procedures change very quickly and something that worked last month may not work this time. We provide the equipment and the expertise to demonstrate everything needed for a totally successful restore of your data to failures such as incomplete backup processes, missing data, corrupt or partial backups.

Document the Process

mWise Recoverability Audit provides an option to create a comprehensive recoverability manual that gives you step by step instructions on what to do to recovery you're data – completely and quickly. As stated above, the changes that occur in your network may, and many times effect your plan and the plan needs to be updated for this simple reason.

Features

- Critical Data Audit
- Trial Restores; fully validated by your staff
- Recoverability Manual
- Current Process and Procedures Documented
- Change Control
- Re-occurring Audits
- Technical Recommendations
